

Intigriti achieves ISO 27001 – the industry’s most highly regarded security standard

BY ANNA HAMMOND · JUNE 10, 2022 · LAST UPDATED ON MARCH 6, 2025

Intigriti, Europe’s leading bug bounty and vulnerability disclosure platform, is pleased to announce that it has attained [ISO 27001 certification](#)—the rigorous international standard that specifies best practices for information security management systems (ISMS).

ISO 27001 certification guarantees the safe management and security of assets such as financial information, intellectual property, employee details or information entrusted by third parties. This latter is particularly critical in Intigriti’s work as a bug bounty platform provider where the highest levels of security are a must due to all confidential data.

Much more than just another certificate on the wall, ISO 27001 guarantees peace of mind to customers entrusting Intigriti with critical security information about cybersecurity vulnerabilities. It also makes it easier for companies who adhere to ISO standards to set up a bug bounty program or partner with Intigriti.

“Providing the highest levels of security is at the core of what we do,” says Niels Hofmans, Head of Security at Intigriti. “It has been inherent in our own internal processes and the critical security work we do for others since our inception in 2016. ISO/IEC 27001 is the best known and most sought-after certification by our customers. By achieving this certification, we’ve taken another step in ensuring our customers can have absolute confidence in the security and privacy of what we do.”
