

Pentesting as a Service reimagined

Hybrid Pentesting is our Pentesting as a Service (PTaaS) offering.

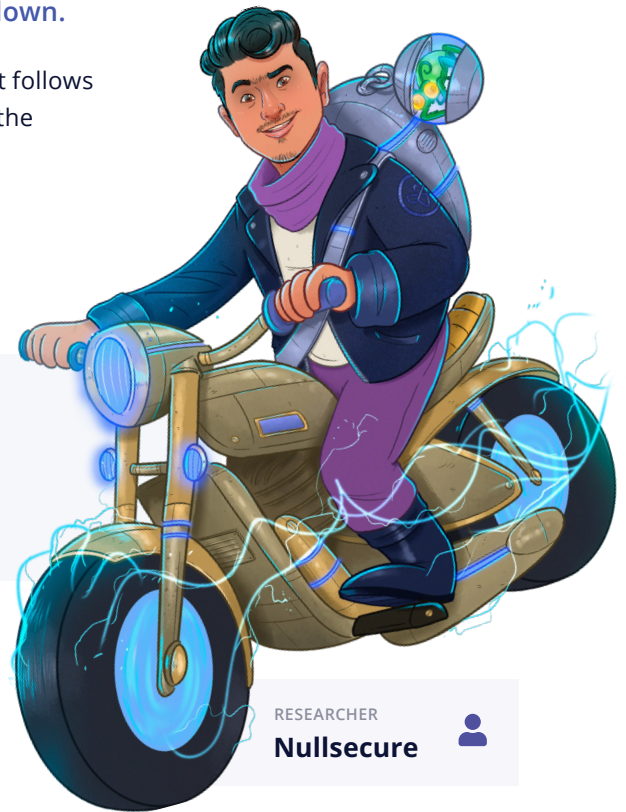

What is Pentesting as a Service you may ask? Let's break it down.

A penetration test is a time-boxed, simulated attack on a system that follows a specific methodology. They're helpful for gaining a quick view into the security posture of an asset and checking for compliance within a short timeframe. Hybrid takes the SaaS approach to traditional penetration testing including triage. It is a more cost-efficient, scalable and flexible way of running pentests.

**Pay for impactful findings
and not for time spent testing**

Why you need hybrid pentesting

Hybrid Pentests have a reward system unique to the industry that ensures the tests attract top talent from our community. On top of that, Hybrid Pentesting offers three key advantages over traditional pentests:

Cost-efficient

With the backend overheads taken care of and the impact-focused approach, you'll make huge savings compared with traditional pentesting.

Real-time results

Hybrid Pentesting can be done in a short time frame, to your specifications, suiting any business type or scale.

Expert skills

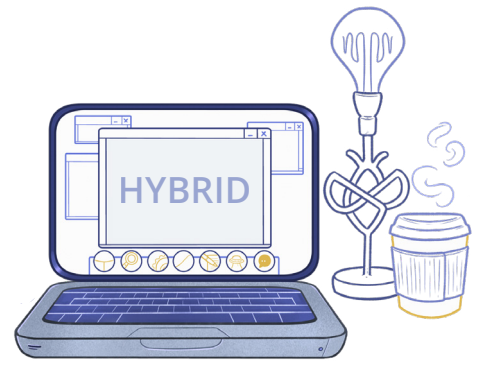

Access expert ethical hackers with a proven track-record and the exact skills needed for your project.

How hybrid pentesting works

Intigriti's hybrid pentests are designed to deliver instant impactful results without much organizational overhead on the client's side.

1. Define your project

We help you define your Hybrid Pentest project by asking questions like, 'What assets are you testing?' and 'How many user roles do you have?'

1

2. Build your program

We work with you to build a custom Hybrid Pentest program and bounty table and start the researcher selection process.

2

3. Select your researchers

Choose from the top 2% of security researchers on our platform. Look through the applications and select the researchers best suited for the job.

3

5. Receive your report

And finally, after completion, you'll receive the final report, as a proof of test. [Access an example report¹](#)

5

4

4. See live results

Once the test begins, you'll see live reports as they come in through the platform. All reports are validated by our triage team.

Key benefits of hybrid pentesting

Start at any time

Start a security test with a lead time of 2 to 3 weeks.

Simplified workflow

A workflow that supports a fast setup on the Intigriti platform.

Dynamic and adjustable test coverage

The security researcher can follow the desired methodology requested by the client or follow their own creative flow of searching for vulnerabilities.

Streamlined project communication

Communicate with security researchers directly through Intigriti's in-platform messaging tool.

Match skills to your project requirement

Choose from qualified and identity checked security researchers who signed up to deliver hybrid pentests.

100% transparency on results

Get instant access to full vulnerability information as soon as a finding is reported by a security researcher on Intigriti's platform.

Easy vulnerability workflow

All vulnerabilities can be managed on Intigriti's platform or via our integrations.

JIRA integration and bidirectional API available.

Pay for impact and focus

The client pays for value (higher payouts for higher severity finding) with a cap on the maximum payout.

About Intigriti

Agile security testing, powered by the crowd

Intigriti's bug bounty platform provides continuous, realistic security testing to help companies protect their assets and their brand. Our community of ethical hackers challenge our customers' security against realistic threats — we test in precisely the same way malicious hackers do.

90,000+ researchers

More than 90,000 security researchers use Intigriti to hunt for bugs — and we're growing!

400+ live bug bounty programs

Companies of all sizes, and across multiple industries, trust Intigriti to launch their bug bounty program.

GDPR compliant

We ensure compliance with the highest security and data security standards.

Strong European presence

Intigriti has a strong global presence. In terms of hacker pay-outs, the 10 best performing countries are globally represented in America, Europe and Asia. In 2021, vulnerabilities were submitted from more than 170 countries.
