

# Intigrity's triage services explained

## Intigriti's triage services explained

Intigriti leverages its experienced team of security analysts to validate and prioritize every finding that is submitted to our platform. With our focus on quality over quantity, we promise an extremely competitive triage lifecycle for clients.

### Intigriti's triage team at a glance

# 1h

is the average amount of time it takes our triage team to respond to researcher questions, allowing them to continue their work and deliver reports to clients more quickly.

# 24h

is the time it takes on average for Intigriti to review, and accept or reject a vulnerability report.

# 41%

of ethical hackers who choose not to, or prefer not to, work with companies outside of a bug bounty platform cite the lack of a triage department as the biggest reason.

# \$71.7M

is the total cybercrime costs saved to date based on the average cost of a data breach (USD 4.24million, according to IBM) and total number of triaged reports by Intigriti.

# 9.2NPS

is the Net Promoter Score that reflects our triage team's swift, fair, and personal approach to triaging.

# How Intigriti triaging services work

Intigriti bug bounty programs offer triage services by default. This security validation process is executed by our in-house security analysts and ensures clients only receive valid, unique and in scope vulnerability reports.

## Steps Intigriti's triage department takes before escalating reports to clients:

- 1 Reproducible**  
Deem whether the vulnerability is reproducible.
- 2 In scope**  
Ensure the vulnerability is genuine and in scope.
- 3 Review report**  
Review the information included within the report.
- 4 Requests**  
Request more information, where necessary.
- 5 Assess the severity**  
Assess the severity of the vulnerability with respect to its risk and security impact in the context of the organization it was reported against.
- 6 Duplicates**  
Check that each submission is unique and remove duplicates.
- 7 Out of scope**  
Decline reports that are out of scope.
- 8 Reproducible**  
Be the go-between for client and security researcher.
- 9 Mediation**  
Provide mediation during times of discord.

I really like the method for submitting reports on Intigriti. First, it's Intigriti's triage team who test and approve the report before they send it to the client. This is important because I know that, if it is passed along to the client, I'm sending across a good vulnerability. From the client-side, this step is valuable because they know they aren't about to have their time wasted.

**Kuromatae**  
Intigriti Cybersecurity Researcher

The most impact we have experienced from working with Intigriti is the extra time that my security team gets back from not triaging reports. What I also appreciate about Intigriti is the feeling that the customer comes first — it is an open and collaborative relationship where we share a common goal to mitigate found vulnerabilities.

# About Intigriti

## Agile security testing, powered by the crowd

Intigriti's bug bounty platform provides continuous, realistic security testing to help companies protect their assets and their brand. Our community of ethical hackers challenge our customers' security against realistic threats — we test in precisely the same way malicious hackers do.

### 90,000+ researchers

More than 90,000 security researchers use Intigriti to hunt for bugs — and we're growing!

### 400+ live bug bounty programs

Companies of all sizes, and across multiple industries, trust Intigriti to launch their bug bounty program.

### GDPR compliant

We ensure compliance with the highest security and data security standards.

### Strong European presence

Intigriti has a strong global presence. In terms of hacker pay-outs, the 10 best performing countries are globally represented in America, Europe and Asia. In 2021, vulnerabilities were submitted from more than 170 countries.
