

Q1 2025 platform updates: What's new & how it helps you

BY YANNICK MERCKX · APRIL 30, 2025 · LAST UPDATED ON JULY 28, 2025

As we have entered Q2 2025, let's dive into key improvements and new features introduced on the Intigriti platform in Q1, the value they bring, and how they positively impact your operation.

Refined control for companies

Intigriti has rolled out several new features, designed to provide organizations with advanced control over their programs and workflows:

- **More Flexible Bounty Structures:** We introduced two additional bounty tiers (4th and 5th) and enabled custom bounty amounts via the Company External API for larger customers.

Why this matters: These updates provide greater flexibility. By adding tiers means you can **better align payouts with asset importance and complexity**, attracting focused researcher attention. Custom API bounties give you the power to **instantly reward outstanding contributions directly through your existing workflows**, reducing manual steps for unique cases.

More info on bounty tiers can be found [here](#)

- **Structured and Actionable Pentesting:** You can now incorporate **pentesting checklists** for web applications, and these completed items are now included in **updated LoA and Pentest Report exports**.

Why this matters: Checklists offer **greater assurance that key areas are systematically tested**, leading to more thorough results. Including these in reports makes it **easier for your team to understand test coverage and quickly identify areas needing attention**, turning findings into direct actions more effectively.

- **Better Program Oversight:** We launched **Program Budget Notifications** and enabled the **deletion of hybrid program drafts**.

Why this matters: Budget notifications help you **ensure uninterrupted security testing by preventing coverage gaps** due to unforeseen budget depletion. The ability to delete drafts **keeps your administrative workspace organized and focused** by removing clutter.

- **Improved Operational Flow:** We improved how **credential uploads maintain their order** and introduced **Advanced Search on the Submission Overview**.

Why this matters: Maintaining credential order **reduces potential confusion for researchers and ensures testing accuracy**, leading to more efficient engagements. Advanced search allows your security team to **quickly pinpoint specific submissions**, significantly speeding up triage, analysis, and response times.

Supporting our researcher community

Our platform thrives thanks to talented researchers. These updates aim to improve your experience and effectiveness:

- **Improved Onboarding Experience:** New researchers now have a guided process to detail their skills and preferences.

Why this matters: This leads to a **personalized platform experience that helps you find program opportunities matched** to your specific expertise and interests.

- **Community Insights with Engagement Logs:** You can now opt in to share data on time spent hunting (currently in data gathering).

Why this matters: This capability aims to **help you understand testing trends and potentially identify less saturated targets** by providing insights into where the community is focusing its efforts.

- **Smoother Reporting with Markdown Upgrades:** We've made helpful tweaks to the Markdown editor.

Why this matters: These improvements help you **communicate findings more clearly and efficiently**, saving valuable time and effort on report formatting.

Platform enhancement for everyone

- **Easier Image Analysis:** Inline images can now be viewed in **full-screen mode** with a simple click.

Why this matters: This allows both researchers validating findings and company teams reviewing reports to **examine visual evidence in detail without downloading files**, speeding up the analysis and validation process for everyone.

We are already hard at work on the next set of enhancements and are excited about what's planned for Q2 and beyond. Want to know more about our latest updates? Check out [platform changelog](#) or contact the team, [here](#)!
