

Submission retesting is here

BY YANNICK MERCKX · OCTOBER 23, 2024 · LAST UPDATED ON JULY 28, 2025

We're excited to announce the new submission retesting feature on our platform! Simplify your ability to validate fixes across all your programs with a click of a button, including bug bounty, vulnerability disclosure, and hybrid pentest programs.

Let's dive into the details!

What is a submission retest?

A **submission retest** refers to the process of evaluating a previously reported vulnerability to determine if it has been successfully mitigated or resolved.

How does submission retesting benefit your organization?

Expert Validation: Engage independent researchers to retest proof-of-concepts from original reports, providing thorough and unbiased validation of your fixes.

This feature is ideal for:

- Companies without the capacity to conduct retests.
- Teams that need specialized skills for complex test setups.
- Organizations looking for cost-effective security validation.

Boost Efficiency: Easily track and manage all outstanding and completed retests, streamlining your workflow and enhancing productivity.

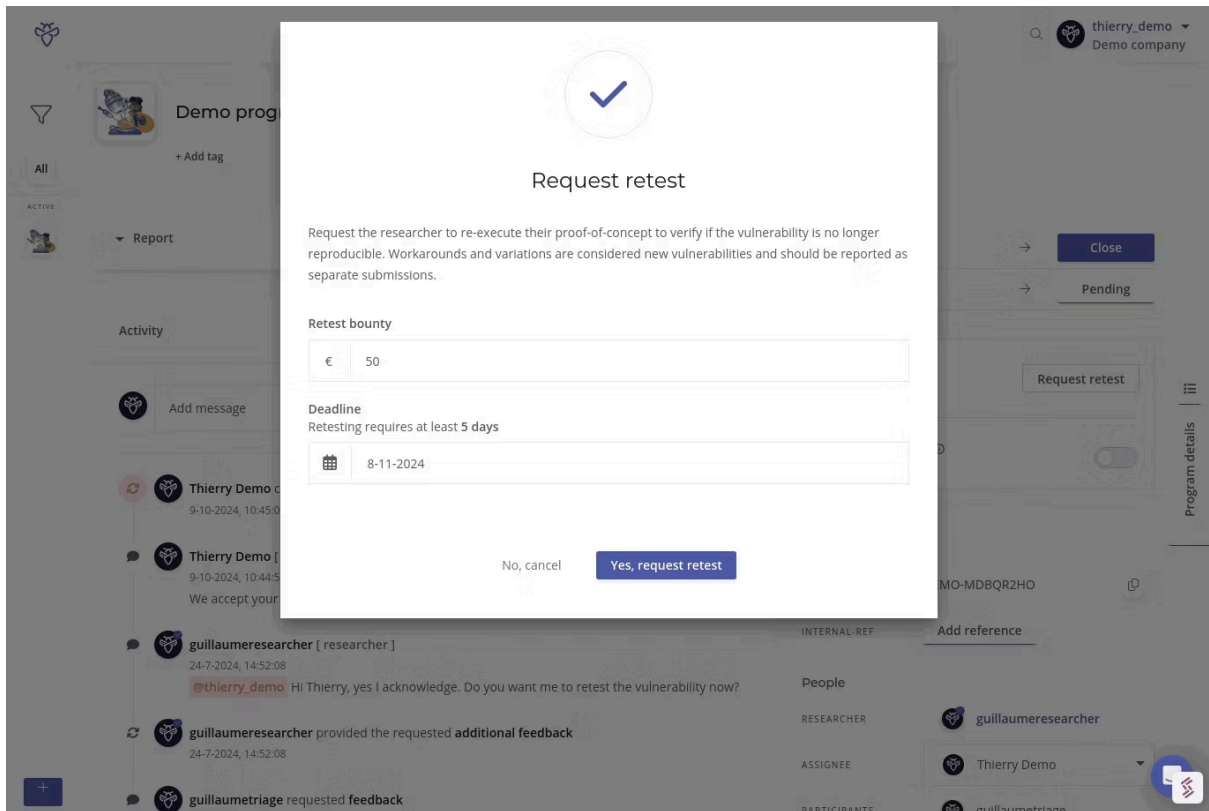

Strengthen Security: Gain insights into the effectiveness of your fixes, reducing the risk of releasing flawed solutions and supporting high standards of security and compliance.

How to request a retest?

Simply go to your program dashboard and select the submission you wish to retest. Follow the guided process to initiate a retest request.

You can use our intuitive interface to keep an eye on the status of your retests, ensuring you stay informed and in control.

For additional information, please refer to [our knowledge base](#) with more details on submission retesting, or discover the feature via [our interactive demo](#).
