Secure your assets with our community of ethical hackers

Intigriti specializes in crowdsourced cybersecurity services that help organizations protect themselves from cybercrime and data breaches. Our industry-leading bug bounty platform enables companies to tap into our global

community, who use their unique expertise to find and report vulnerabilities in a secure process that protect your business.

Hacking community

Our **community of ethical hackers¹** discover vulnerabilities and improve your security.

Triage support

All reports are validated by our **expert triage team²** and managed via our platform.

Security certifications

We support your compliance requirements and are **ISO 27001 and SOC 2 certified³**.

How it works

All security programs are including Intigriti's all-in-one services like; onboarding management, customer success management, triage, community management, and our interactive SaaS platform. Whether you are launching a VDP, Bug Bounty, or Hybrid Pentest, setting up a crowdsourced security program with Intigriti is simple:

- 1 Choose your program type**
Our customer success team is on hand to help you **determine which program is best for you.**
- 2 Start your journey**
You call the shots by setting the terms of engagement and whether your bounty program is public or private.
- 3 Boost your cybersecurity**
Once your program is launched, you will start to **receive validated vulnerability reports** from our ethical hacking community.
- 4 Optimize your program**
We help you **optimize or modify** your VDP, Bug Bounty program, and Hybrid Pentest **for long-term success.**

More than a bug bounty platform

Our services can be divided into 3 main categories

1. Bug Bounty / VDP

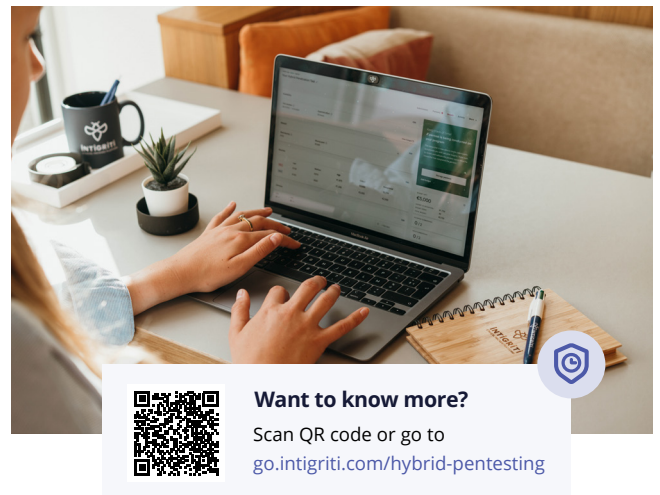

A **bug bounty program** allows ethical hackers to test your company's web applications, enterprise infrastructure, and other digital assets for security vulnerabilities for a financial reward.

A **vulnerability disclosure program** (VDP) is similar to a bug bounty but without a cash incentive for cybersecurity researchers. With no financial rewards to pay, VDPs can be a cost-efficient way of using the power of our ethical hackers to discover and fix security vulnerabilities.

2. Hybrid Pentest

Hybrid Pentesting uses a cost-efficient and scalable 'Penetration Testing as a Service' model that allows you to access the expert skills of our ethical hacking community.

- **Time-boxed penetration** test with your desired methodology
- **Short lead time** ideal for working to a tight deadline
- **Simple to set up** with **real time updates** through our platform
- **Pay-for-value and triage** like bug bounty
- Collaborate in a **private or public** setting

3. Live Hacking Events

These high-profile events are fast, intensive testing periods where assets are picked apart by some of the most expert members of our ethical hacking community.

In addition to their ability to generate immediate results, **Live Hacking Events** create a huge amount of buzz and a multitude of PR opportunities.

- **High-profile events** that attract top hacking talent
- **Vibrant atmosphere** where companies and hackers can have fun
- **Intensive hacking** in a short period of time
- **Generate buzz** while finding bugs

About Intigriti

Agile security testing, powered by the crowd

Intigriti's bug bounty platform provides continuous, realistic security testing to help companies protect their assets and their brand. Our community of ethical hackers challenge our customers' security against realistic threats — we test in precisely the same way malicious hackers do.

100.000+ researchers

More than 100.000 security researchers use Intigriti to hunt for bugs — and we're growing!

400+ live bug bounty programs

Companies of all sizes, and across multiple industries, trust Intigriti to launch their bug bounty program.

GDPR compliant

We ensure compliance with the highest security and data security standards.

Strong global presence

Intigriti has a strong global presence. In terms of hacker pay-outs, the 10 best performing countries are globally represented in America, Europe and Asia. In 2021, vulnerabilities were submitted from more than 170 countries.
